

Light Reflectance Values

LRV (Light Reflectance Value) is the total amount of visible light that is reflected from any surface. In interior furnishing, that can be furnishings, walls, ceilings, and flooring.

The scale for reporting LRV is based on 0 to 100, where 0 represents a surface or material which absorbs all light that strikes it and 100 represents a surface or material which reflects all light that strikes it. Because of finish, color, and texture of the material, no material is either totally reflective or absorptive, even whites and blacks do not approach 100 or 0.
